

# Modification 386 - Extending rights to Protected Information provisions for Meter Asset Managers / Registered Metering Applicants – unpopulated MAM id records

---

1

- A modification seeking to amend the protected information provisions in the UNC to permit the release of data to Meter Asset Managers (MAMs) in certain circumstances

## Modification 386 - Extending rights to Protected Information provisions for Meter Asset Managers / Registered Metering Applicants – unpopulated MAM id records - background

---

2

- UNC currently permits the provision of supplier id and meter asset information to the registered MAM
- Registered MAM is defined as the MAM registered against the supply meter point on the supply point register
- Currently, approximately 263,000 supply meter points do not have a MAM registered against them
- The UNC does not permit the release of any data to a MAM for a supply meter point where there is no MAM registered on the supply point register
- Currently, in these circumstances, some MAMs resort to contacting all suppliers to try to identify the relevant supplier

## Modification 386 - Extending rights to Protected Information provisions for Meter Asset Managers / Registered Metering Applicants – unpopulated MAM id records - background

---

3

- At the June Mod Panel, Ofgem requested National Grid to confirm if the UNC already provides for the service described in this proposal
- National Grid have confirmed that the UNC does not permit the release of data to a MAM where the MAM id is not populated on the supply point register and, therefore, a modification is required to permit the provision of the information

## Modification 386 - Extending rights to Protected Information provisions for Meter Asset Managers / Registered Metering Applicants – unpopulated MAM id records – proposed actions

---

4

- Change the provisions in UNC to permit the GTs to release the supplier id, meter serial number and meter model to a MAM where the enquiring MAM provides a MPRN to which there is no MAM registered on the supply point register
- Change Benefits
  - MAMs are able to identify the supplier to a meter and establish the relevant arrangements.
  - Improved quality of data on MAM and supply point register and any subsequent processes e.g. change of supplier events.
- Note: to receive the service the MAM must provide the MPRN, they will not be permitted to request a portfolio of “blank” MPRNs.
- Note: where the MAM id is populated the enquiring MAM will be advised that another MAM is registered to the MPRN, the registered MAM id will not be released
