

Remaining UNC Sections for Modification Proposal 461

Meeting Friday 13th September 2013

David Corby

Background – Mod 0461 UNC Review

- Previous presentations have addressed the impact of Mod 0461 on:
 - Capacity
 - Demand Estimation and Physical Flows
 - Nominations and Balancing
- This presentation covers all remaining sections of the UNC TPD

UNC Sections Included

- All the remaining UNC sections have been reviewed, and time references have been found in:
 - Section E: Daily Quantities, Imbalances and Reconciliation
 - Section G: Supply Points
 - Section M: Supply Point Metering
 - Section K: Operating Margins
 - Section N: Shrinkage
 - Section Q: Emergencies
 - Section R: Storage
 - Section S: Invoicing and Payment
 - Section U: UK-Link
 - Section X: Energy Balancing Credit Management
 - Section V: General
 - Section Z: National Grid LNG Storage

UNC Review of Sections

- 49 sections containing time references
- Analysis of any processes attached to times references has informed our decision whether a change is required
- All sections containing a time reference have been assigned into one of four categories:

	No Change required to UNC Time
	Change Required to UNC time to align with new Gas Day time (no process impact)
	Change might not be required to UNC time, discussion with industry required to confirm.
	Change Required to UNC time with associated process impact

Results Overview

- Many UNC sections show no or very few time references
- Many references concern publication of data, and impact on these may be dependant upon industry usage
- The greatest impact appears to be on Sections M: Metering, V: General and Z: NG LNG Storage
- Exact impacts require discussion and then agreement with the relevant impacted users – **What are the views of the Mod 461 workgroup?**
