

End of Year Reconciliation for Certain Smaller Supply Points

Fiona Cottam

19 August 2003

Feedback – Why are changes of User excluded?

- Where a supply point changes User, both Users share the benefits and the disadvantages.
 - The original user is now disadvantaged by the RbD impacts of an inappropriate reduction
 - The original user is now advantaged by the RbD impacts of an inappropriate increase
- Unfair to penalise the new User for another's inappropriate behaviour
- Statistically, transfers will be spread throughout the gas year and market
- Excluding transferred supply points leaves the financial impacts shared between affected Users and is equitable
