

Review Group 0140

September 2007 Monthly Report to Panel

Meeting Held

21 August 2007

Planned

08 October 2007, Elexon.

Matters for Panel's Attention

Topics Discussed

The Group completed its review of data items with substantial agreement reached on which of these will be included on the website.

Agreement was also reached on the format of the proposed data dictionary, which will form the core of the revised Network Code Operations Reporting Manual. National Grid NTS has submitted to the Group the data dictionary pages for Demand and Supply and these have been agreed. National Grid NTS was, however, unable to provide the pages for other areas of the database, in time for the meeting arranged for 18 September 2007, and this was therefore cancelled.

The Group was unable to reach consensus on the additional data items, such as entry and exit pressures, proposed by Chris Wright (CW) of Centrica, if the intention was to provide these within-day. However, there was more support for the proposal that these items be made available after the day. CW agreed to revise his proposals accordingly in the hope of reaching a consensus. If a consensus is reached, a UNC Modification Proposal will be raised by the Group.

The initial Review Group report was presented to the Group by the Joint Office and amendments were made at the meeting.
