

Revisions to the Entry Point Daily Quantity Delivered after D+5

May 2016

To Date

- On Ofgem's recommendation we have been gathering evidence to inform resolution
- We have spoken to 4 sites, and received written feedback from 2
- We intend to engage with at least 1 more site

Feedback from Terminals

- Some unaware of D+5 deadline
- Where there were late revisions this is usually due to:
 - Metering failure
 - Human error
- Challenging because timescale defined as calendar rather than business days
 - However, the majority of sites felt data could always be provided by D+1
- Currently there is no indicator whether the file was received by NG
- Some sites use software to check the data provided, others rely on individuals sense checking
- A couple stated if NG unable to facilitate late revisions in future, a bigger reporting window would be welcomed

Next steps

- Complete collation of evidence from contacted terminals
- Make recommendation for resolution
- Agree this resolution with Industry and Ofgem
- Terminals confirmed they are happy for this to be taken forward via the Ops Forum
