

Review of the OCM Operator Provision

Background

- NGG – In our role as Energy balancing Gas Transporter we are required under Standard Special Condition A11 of the GT Licence to appoint an independent market operator (MO) to provide an electronic trading system
 - OCM –  ICE ENDEX
- In March 2015 an additional gas spot market exchange platform launched in the UK offering a title 24/7 product
- In June 2015 Ofgem wrote to NGG to encourage us to explore the current MO arrangements in consultation with interested parties. To gain an industry view on whether these should be revised in light of recent changes.
