

Minutes from the Distribution Workstream 26th August 2010

Minute 3.6. 0050Dis, DM Unbundling

xoserve has noted that the Distribution Workstream minutes contain references to the DM Elective Service and allegations that the system does not work. xoserve notes that there is no supporting justification for these claims and it is inappropriate that unsubstantiated claims are made that they appear to become factual by matter of inclusion in the Workstream minutes.

xoserve can confirm that the systems being built to support Modification 224 DM Elective, are fully compliant with the business rules defined during the Modification proposal development. Several knowledge sharing meetings have been held with industry parties and a shipper testing facility is currently being used. The service is on schedule to be available from 21st November.

If any shipper has any questions regarding the DM Elective service please contact xoserve directly to discuss the matter.
