

Variation Request

0326V: Allocation of unidentified gas following the appointment of the Allocation of Unidentified Gas Expert (AUGE)

Date: 20th June 2011

The Proposer, ScottishPower, requests a variation to this modification, pursuant to UNC Modification Rules Section 6.5.1(c) of the UNC Transition Document.

Reason for Variation

This variation is proposed to clarify the types of “issues” that would be applicable under the rules established by Modification 0326V, as ScottishPower understands that there may be some confusion over the intention of the modification.

Nature of Variation

To make the modification more specific in relation to the issues that would be applicable under the rules introduced by Modification 0326V. It was never intended that the modification would be applicable to issues already known and being worked on and developed by the industry, for example: theft of gas methodology, shipperless and unregistered sites.
