

Stage 02: Workgroup Report

0450/0450A/0450B:

Monthly revision of erroneous SSP AQs outside the User AQ Review Period

At what stage is this document in the process?

These modifications should provide Users with the ability to amend the AQs of a limited amount of SSPs each month outside the User AQ Review Period where these are erroneous.

The Workgroup recommends that these modifications should now proceed to consultation.

High Impact:
Smaller Suppliers

Medium Impact:
Larger Suppliers

Low Impact: Xoserve

Version 0.7

Page 2 of 11

1 Summary

Is this a Self-Governance Modification?

The Modification Panel determined that these are not self-governance modifications.

Why Change?

The current arrangements, whereby AQs for SSPs can only be amended during the User AQ Review Period, make it impossible for SSPs with erroneous AQs to be amended in a timely manner during the rest of the year. Suppliers are balanced against the AQs of the sites they supply; therefore this has a disproportionate impact on smaller suppliers when they acquire SSPs of this nature from other suppliers and thus has a knock on effect on their ability to compete effectively as they are less able than other larger suppliers to cover the costs resulting from this situation. In addition, erroneous AQs result in misallocation of costs and it should be made easier for suppliers to correct the most seriously inaccurate of these.

Solution

Modification

0450

It is proposed that all Users are given the ability to amend the AQ of set number of SSP (AQ<73,200 kWhs) sites outside the User AQ Review Period – between 1st October and 31st May.

~~X~~serve have not undertaken detailed performance assessment on system capacity, but estimate that a maximum capacity of SSP Appeals would be 20,000 instances per month for the industry. These instances mean attempts of Appeals; the count of issued T17 dataflows in the given month. ~~X~~serve confirmed that the outcome of SSP AQ Appeals is going to be AC for Accepted or RJ as rejected, no RF – referral to manual validation will be available. Xserve ~~will~~ create a rejection code for exceeding monthly Appeal allowance in T18 dataflows.

At initial implementation the number of Appeals available for each Shipper will be derived as follows; described below:

4- Each Shipper with less than {50} Meter Points in their portfolio will be allocated the number of meter points in their portfolio as at snapshot date.

1. Each Shipper with more than {50} Meter Points in their portfolio will be allocated {50} Appeal opportunities as the minimum.
2. Deducting the sum of the Appeal in point 1 and 2 from the total {20,000} instance per month will be the basis of the Small Supply Point (defined as AQ< 73,200kWhs) count based market share percentage allocation. This percentage allocation to be defined to one decimal point.

As an example ~~upon initial implementation~~:

- Shipper A has 24 Meter Points in their portfolio at the time the snapshot is taken, therefore 24 Appeal ~~opportunities~~opportunity will be allocated ~~to the given Shipper~~ for each month during the predefined period the snapshot was taken for.
- There are 15 shippers ~~(as at March 2013)~~ with fewer than 50 supply points, as total they have 540 Meter Points, so they will be allocated 540 instances of the 20,000.
- There are 30 Shippers ~~(as at March 2013)~~ with more than 50 Meter Points in their portfolio, so each will be allocated 50 instances, adding up to a total of 30*50=1500.
- The remaining pot equates to 20,000-540-1500=17960.
- Shipper B has 450,000 Meter Points, which equates to 2.1% of the number

0450
Workgroup Report
01 November 2013

Version 0.7

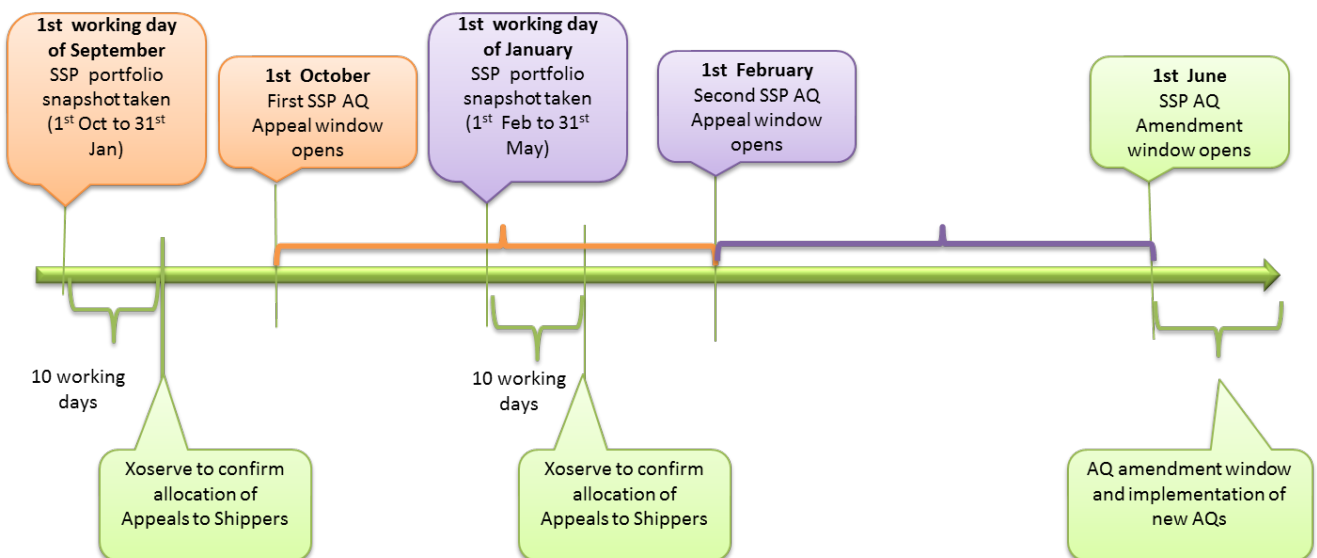

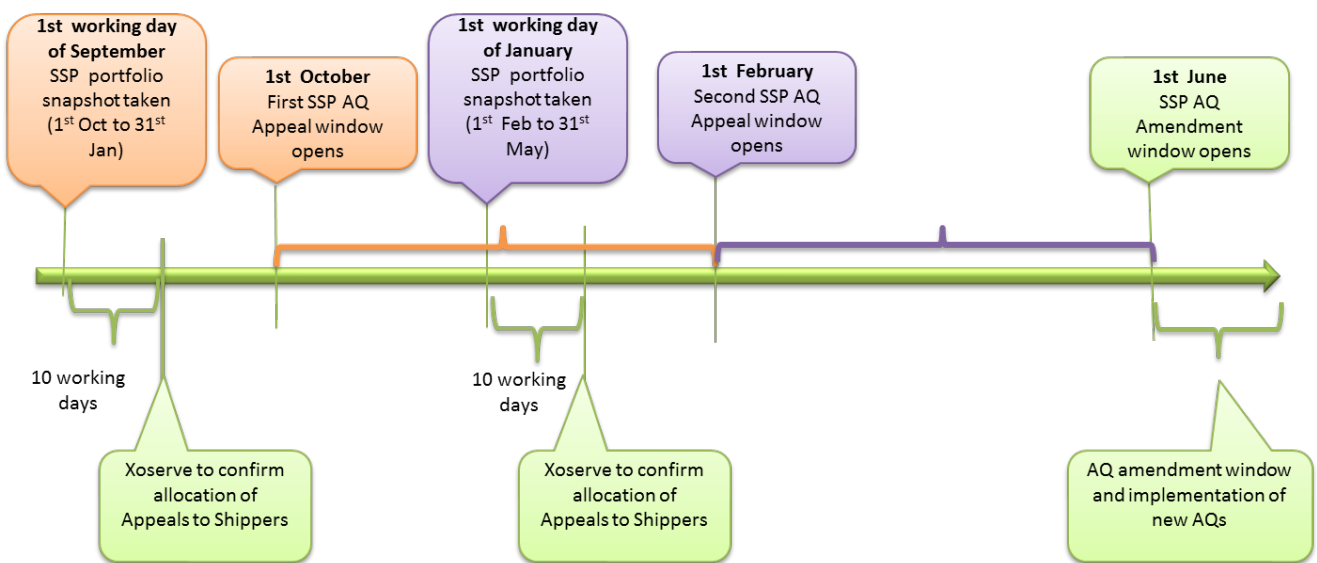

Page 3 of 11

Appeal ~~opportunities~~opportunity on top of the allocation of 50, so the total is 427 each month for Shipper B.

The above described calculation will be carried out twice a year by Xoserve.

A snapshot of the portfolio will be taken on

- 1st working day of September, to calculate the monthly allocation for the period of 1st October to 31st January
- - 1st working day of January, to calculate the monthly allocation for the period of 1st February to 31st of May.
- Between 1st June and 1st October the Shippers will utilise the AQ amendment process, for the new AQs to be effective and therefore available for AQ Appeals from 1st October.

~~Implementation is requested to be as soon as possible. If implementation is possible before 1st May or earlier, the allocation should be defined based on a snapshot taken on 1st of the month before the implementation.~~

Xoserve will notify the relevant members (contacts on the Xoserve AQ distribution list) of Shippers of the number of monthly Appeals allocated, within ten working days of the snapshot dates via e-mail.

If the Shipper was not to utilise the appeal allowance for the month, the remaining number of appeal opportunity is lost, and ~~cannot~~ be rolled over to the following month.

~~This will allow SSPs with erroneous AQs to have these amended to the correct figure, thus mitigating to some extent the disadvantage in not being able to amend these more frequently than at present.~~

~~After 3 month of operation Xeserve shall publish utilisation figures to the industry and where actual capacity information is available shall amend the base figures of the calculation (initially set to 50).~~

~~Implementation would assist in the revised allocation of costs across the industry within RbD by enabling AQ values to be more responsive, as suppliers would be expected to prioritise the correction of the most inaccurate SSP AQs within their individual portfolios.~~ A 20% rule will apply in each case with a minimum 4000 kWh amendment; no AQ amendment less than these for any SSP may be carried out, unless the Meter ~~Point~~ current AQ is 1, in which case the above describe ~~tolerance~~ are not applicable, and the Shipper can Appeal the AQ to any other ~~value~~ but 1.

~~It is expected that all Shippers will take a balanced approach in carrying out AQ appeals.~~

Modification 0450A

As above. However, Users will be allowed to Appeal an SSP AQ value for MPRNs acquired from other suppliers, on or between the dates of the 1st September and 31st May, through the Change of Supply process. This evidence must include a pair of valid meter readings demonstrating a consumption change.

Solution Summary

British Gas' proposal allows Users to amend erroneously high or low SSP AQs if the MPRN is acquired from another shipper organisation, on or between the dates of the 1st September and 31st May.

The amendment to amend the newly acquired AQ should follow the LSP AQ Appeals process, providing there is a pair of valid meter readings, demonstrating a consumption change.

This should have the desired outcome for Users to have the ability to amend erroneous AQs which come into their ownership.

Modification 0450B

Should this proposal be implemented, shippers with SSP customers in their portfolios will be given the ability to appeal the AQs of certain SSP meter points, where these are erroneous, outside of the User AQ Review period, i.e. from 1 October to 31 May. A 20% rule will apply in each case with a minimum permissible amendment of 4000 kWh, unless the SSP's current AQ is 1, in which case these rules will not apply. Reporting of SSP appeals will be issued quarterly as part of the UNC378 report. This will be treated as user pays and charged monthly based on the SSP market share of each shipper by number of meter points supplied.

Relevant Objectives

Implementation of one of these modifications would further effective competition between relevant Shippers in line with objective d) as it would allow Shippers to manage their small supply point portfolio more closely, AQ accuracy would increase further in the industry which allow more accurate distribution of volume and costs

0450

Workgroup Report

01 November 2013

Version 0.7

Page 5 of 11

Implementation

Implementation 01 September 2014 decision to implement is received by 31 January 2014

Implementation 01 October 2014 decision to implement is received by 28 February 2014

if a decision to implement is received after 28 February 2014, implementation 180 to 270 day days following the decision to implement.

These modifications cease relevance upon implementation of the Project Nexus solution.

2 Why Change?

All Shippers are disadvantaged by the current inability to amend AQs for SSPs outside of the User AQ Review Period. As Shippers are balanced against their AQs, erroneous AQs for acquired SSPs create a multitude of issues which directly impact on the ability of smaller shippers and suppliers to compete on level terms with their larger competitors who are much more able to bear the cost of erroneous AQs within their portfolios.

3 Solution

Modification 0450 Solution includes insertions or different values for Modification 0450A in BLUE

Users will only be allowed to Appeal an SSP AQ value for MPRNs acquired, on or between the dates of the 1st September and 31st May, through the Change of Supply process. This evidence must include a pair of valid meter readings demonstrating a consumption change.

Users will be allowed to Appeal an SSP AQ value for MPRNs acquired from other suppliers, on or between the dates of the 1st September October and 31st May, through the Change of Supply process. This evidence must include a pair of valid meter readings demonstrating a consumption change.

Shippers will be able to challenge SSP outside of the AQ amendment window: 1st October to 31st May. A 20% rule will apply in each case with a minimum 4000 kWh amendment. No AQ amendment lesser than these for any SSP may be carried out- unless the Meter Points current AQ is 1, in which case the above describe tolerance s are not applicable, and the Shipper can Appeal the AQ to any other volume but 1. As an example, AQ of 1 can be appealed to AQ of 2,000, however AQ of 4,000 can be appealed to AQ of 9000 as the change is greater than 4,000 kWhs and the change is more than 800 kWhs - 20% of the original 4,000 AQ. This is to ensure only erroneous AQs are corrected.

As the proposed number of extra SSP amendments allowed to take place outside the User AQ Review Period would amount to up to 240,000/160,000 extra amendments per gas year and these will be staggered over the whole year/8 month period.

The process will utilise the existing AQ Appeals process. Once the new AQ is agreed, the Shipper will need to re-confirm the MPRN with the new AQs.

The existing LSP AQ Appeals process requires use of the Nomination process to enable an MPRN to be nominated with an AQ Appeals reference number. The Confirmation-only process currently operated for SSPs does not allow for a change of

to use the Nomination process or for AQ Appeal functionality to be included in the Confirmation-only process. Changes will be required by both Shippers and Xoserve to their registration systems and processes.

Following Distribution Workgroup discussion, Xoserve has conducted a ROM assessment which indicated that a system solution was most cost effective.

The assessment was based on 400 appeals by 20 Shippers monthly; the cost estimate over two years is the below:

- Manual solution would cost an estimated £855k - £1.09m for the industry
- Systemised solution would cost an estimated £150k - £210k for the industry.

Reporting of SSP Appeals will be issued quarterly as part of the MOD378 report. Timescales and content as described in MOD378. The report will be sent to the relevant contacts held on AQ related and MOD378 related Xoserve distribution lists. **Xoserve will monitor and report monthly that there are no inter-shipper transfers.** This is subject to performance evaluations, to be confirmed as part of the ROM.

We agree that any changes required should be treated as User Pays, and should be charged monthly based on the MPRN count percentage of the given Shipper in the SSP market, utilizing the calculation outlined in the Solution section.

Modification 0450B

It is proposed that all Users with at least one Smaller Supply Point in their customer portfolio be given the ability to amend the AQs of a set number of SSP (AQ<73,200 kWhs) meter points each month outside the User AQ Review Period, i.e. between 1 October and 31 May each year.

Xoserve has carried out preliminary analysis and estimates that an industry wide total of 20,000 SSP AQ appeals could be accommodated each month outside of the User AQ Review Period. Attempted appeals will be carried out by means of the T17 dataflow, with Xoserve confirming acceptance or rejection of each. A separate T18 dataflow rejection code will be created in relation to any User exceeding its monthly appeals allowance.

At first implementation the number of appeals available to each User will be calculated as follows:

- i) A snapshot of each shipper SSP portfolio will be taken by Xoserve on:
 - a) The 1st working day of September, in order to calculate that shipper's monthly appeal allocation for the period from 1 October to 31 January inclusive;
 - b) The 1st working day of January, in order to calculate that shipper's monthly appeal allocation for the period from 1 February to 31 May inclusive.
- ii) Each shipper with 1 or more but less than 50 SSP meter points in its customer portfolio on the date when the snapshot is taken by Xoserve will be allocated a number of monthly SSP AQ appeals outside of the User AQ Review period equivalent to the number of SSP meter points in that portfolio.
- iii) Each shipper with equal to or more than 50 SSP meter points in its customer portfolio on the date when the snapshot is taken by Xoserve will be allocated 200 monthly SSP AQ appeals outside of the User AQ Review period.
- iv) Once a number of monthly appeals has been allocated to each shipper as described in points i) – iii) above, any residual monthly appeal capacity will be allocated to each shipper on the basis of its share of the SSP market by the number of meter points it supplies. The percentage allocation shall be defined to one decimal place.

- v) Xoserve will notify each qualifying shipper of its allocated monthly number of SSP AQ appeals for the relevant period by email within ten working days of each snapshot date.
- vi) For each appeal, a 20% rule will apply with a minimum 4000 kWh amendment. No amendment may be carried out unless it fulfils these two rules, except in the case where the current AQ of the appealed SSP meter point is 1 in which case neither rule applies.
- vii) Appeals will be use it or lose it, i.e. they cannot be traded, sold or reallocated to another shipper and cannot be rolled over or reallocated to another month.
- viii) From 1 June to 30 September inclusive, shippers will make use of the User AQ amendment process as part of the User AQ Review period as laid out in the UNC.

As an example upon initial implementation (all numbers are for illustrative purposes):

- Shipper A has 24 SSP meter points in its customer portfolio on 1 September when the snapshot is taken by Xoserve. It is therefore allocated 24 SSP AQ appeals each month for the period from 1 October to 31 January inclusive.
- 15 shippers have fewer than 50 SSP meter points in their customer portfolios on 1 September, with a total for all 15 shippers of 540 SSP meter points. This gives these 15 shippers a total of 540 SSP AQ appeals during each relevant month (October – January).
- 30 shippers have more than 50 SSP meter points in their customer portfolios on 1 September, so each is assigned 200 SSP AQ appeals during each relevant month (October – January). The baseline total for all 30 shippers is 6,000 SSP AQ appeals for each relevant month.
- Xoserve estimates that it can accommodate 20,000 monthly SSP AQ appeals outside of the User AQ Review Period. In the examples above, 6,540 monthly SSP AQ appeals have already been assigned. $20,000 - 6,540 = 13,460$ residual unassigned monthly SSP AQ appeals.
- Shipper B has 450,000 SSP meter points in its customer portfolio, which translates to a 2.1% share of the SSP market by number of meter points. $13,460 * 0.021 = 282.66$ which is rounded up to 283. This means that Shipper B receives an additional 283 monthly SSP AQ appeals in addition to its baseline allocation of 200 monthly SSP AQ appeals, giving Shipper B a total of 483 SSP AQ appeals during each relevant month (October – January).

Reporting of SSP appeals will be issued quarterly as part of the UNC378 report.

User Pays
Classification of the modification as User Pays or not and justification for classification
These modifications are classified as User Pays as the changes proposed would introduce new User Pays services.
Identification of Users of the service, the proposed split of the recovery between Gas Transporters and Users for User Pays costs and the justification for such view.
100% cost to Users with a Small Supply Point portfolio.

Proposed charge(s) for application of Users Pays charges to Shippers
An ACS is to be published
Proposed charge for inclusion in the Agency Charging Statement (ACS) – to be completed upon receipt of a cost estimate from Xoserve.
The charging basis for User will be an allocation of the development costs plus the ongoing costs for 2014/15 to each User based upon each User's number of Smaller Supply Meter Points in proportion to the total number of all Users' Smaller Supply Meter Points as measured on the date of the implementation of the modification, excluding Unique Sites

4 Relevant Objectives

Impact of the modification on the Relevant Objectives:

Relevant Objective	Identified impact
a) Efficient and economic operation of the pipe-line system.	None
b) Coordinated, efficient and economic operation of (i) the combined pipe-line system, and/ or (ii) the pipe-line system of one or more other relevant gas transporters.	None
c) Efficient discharge of the licensee's obligations.	None
d) Securing of effective competition: (i) between relevant shippers; (ii) between relevant suppliers; and/or (iii) between DN operators (who have entered into transportation arrangements with other relevant gas transporters) and relevant shippers.	Positive
e) Provision of reasonable economic incentives for relevant suppliers to secure that the domestic customer supply security standards... are satisfied as respects the availability of gas to their domestic customers.	None
f) Promotion of efficiency in the implementation and administration of the Code	None
g) Compliance with the Regulation and any relevant legally binding decisions of the European Commission and/or the Agency for the Co-operation of Energy Regulators	None

Implementation of these modifications would further effective competition between relevant Shippers and Suppliers in line with objective d) as Shippers would be able to amend erroneous AQs outside the User AQ Review Period thus counteracting the current disadvantage with the current process.

More accurate AQs will lead to more accurate and efficient allocation of costs across the market.

Some participants consider Modification 0450A offers additional advantages, as the other modifications require Users to participate in the process to maintain their overall position in terms of allocation. However, as Modification 0450A only applies to new customers in a Users portfolio, it will not require Users to administer the process over the proposed 8 months review period and will therefore keep operational costs to a

Some participants consider implementation of Modification 0450B would facilitate effective competition between shippers and suppliers in line with relevant objective d) as it will result in more appropriate allocation of costs and reduce the disproportionately increased and non-reflective credit and commodity purchase costs which inaccurate SSP Aqs and the current inability to amend these outside of the User AQ Review Period result in for smaller shippers.

Some participants were concerned that the benefits of implementation have not been demonstrated to prove that allocation will be significantly improved to offset the cost to implementation for the changes proposed in these modifications.

5 Implementation

Implementation 01 September 2014 if a decision to implement is received by 31 January 2014

Implementation 01 October 2014 if a decision to implement is received by 28 February 2014.

If a decision to implement is received after 28 February 2014, implementation 180 to 270 day days following the decision to implement as Xoserve have estimated that development would take between 6 and 9 months. However, it should be noted that an implementation date by 01 September may still be achievable should a decision be made after 31 January 2014.

Attempts have been made in the past to amend the AQ process for SSPs but these have often encountered delays and cost barriers due to the large amount of work that could be required on Xoserve's systems to implement far-reaching changes. The proposer is hopeful that limiting the amount of SSP amendments allowed outside the User AQ Review Period to 20,000 per calendar month should support the implementation of this change.

It has been confirmed by Xoserve this change will not impact/delay the development of Project Nexus. This Modification would support Shippers to prepare to Nexus on a small scale by having to manage a number of mid-year small supply point AQ changes. The implementation of this Modification is recommended to be the earliest possible time, so the industry and all Shippers take maximum advantage of it.

Development and operational costs for 1 year would be between £160,000 to £230,000. The operational costs are to be included with the development cost as the implementation of Project Nexus during 2015 would make these proposed changes redundant and there service would only be operable for 1 year.

6 Legal Text

[The Text for these modification has been prepared by National Grid Distribution and is published alongside this report, and no issues were raised by the Workgroup regarding its content.]

7 Recommendation

The Workgroup invites the Panel to:

- AGREE that this modification should be submitted for consultation.
