

Hi Bob,

On the separate issue of the likelihood of future UNC Modifications impacting on the iGT UNC where the iGT UNC has legal text references to the UNC which may be changed by the modification, it would be appreciated if the issue could be briefly covered at a UNC Distribution workstream.

Whilst there is no obvious universal solution, it is hoped that full awareness of the risk by both Code Administrators and industry parties may help in identifying the likelihood of this situation at the earliest opportunity. This would then give more time to consider possible solutions - e.g. potential restructuring of any proposed UNC legal text change to avoid the need for subsequent iGT UNC legal text change – and to allow the iGT UNC to plan the necessary action – e.g. a FastTrack Modification, if required.

Another option may be to place more emphasis on the need for the workgroup to identify potential impacts on other Codes in the workgroup report. The increasing representation at the workstream of parties familiar with both Codes should help in this.

Kind regards,

Steve
