Mod Title: Creating the permissions to add the Meter Asset Manager (MAM) Id to Shipper & Supplier community view within Data Enquiry Service (DES)

Proposer: Gazprom

Panel Date: 21st September 2017

Why change?

- Pre Project Nexus Implementation, the MAM Id data item was visible to Shippers and Suppliers within community view in DES.
- Following an internal review of data permissions, it was confirmed that the explicit permissions to provide this data item did not exist currently and the MAM Id was deemed to be commercially sensitive. This resulted in the Post Project Nexus Implementation solution removing the MAM Id data item from the community view.
- Suppliers have advised that pre-Nexus this data item was used in relation to customer pricing and resolving meter point queries.
- Restoring the MAM Id data item will assist Suppliers/Shippers in undertaking these activities.

Solution

- The Modification seeks to create the permissions for the MAM Id data item to be visible for Shippers and Suppliers in community view DES.
- TPD Section V of the UNC should be amended to permit the release of data in line with the Permissions Matrix to be held within the UK Link Manual.

Recommended Steps

The Proposer recommends that this modification should be:

- Subject to self-governance
- Workgroup assessment to develop the modification for two months

As self-governance procedures are proposed, implementation could be sixteen business days after a Modification Panel decision to implement, subject to no Appeal being raised.

The recommended timeline proposes that the initial consideration by Workgroup will be 28th September 2017 and the draft Modification Report issued for consultation on 16th November 2017.

It is anticipated that this Modification goes to Panel for a decision by December 2017.
