COR4216 'API Platform Implementation'

	Overall Project RAG Status			G
	Time	Risks and Issues	Cost	Resources
RAG Status	G	G	A	G
Status Explanation				
Time	• BackOffice Associates are on track for completion of the API build phase on 25/09. • On 15/08; it was agreed that Xoserve will be working with Gemserv, to deliver a joint API solution for the PCWs. • Following an agreement between Xoserve and Gemserv, it was decided that we will be using a 3rd party organisation to collect data from gas & electricity, and provide it to the PCWs. • On 31/08; Xoserve, Gemserv and C&C (3rd party aggregator) agreed on the scope for the 3rd party aggregator, we will be working to provide a Statement of Work (SOW) for review at the CEO meeting on 25/09.			
Cost	• Once C&C (the 3rd party aggregator) come back with firm low level costs, we will then feed them into an amended business case and seek re-sanction.			
Risks and Issues	• There are currently no open risks.			
Resources	• All project resources are in place and committed to the delivery of the project.
