# Discussion Topic – Post Switch Administration - Provision of Information to Shippers

Existing Process – Provision of Data in Support of CoS

NMR (NRF)   CFR   MRI (PAC) /
                                   TRF

- Data provided to Shipper Users at a Registration Event:
  - Settlement Details
    - Reflection of incoming files (e.g. SOQ / SHQ)
      - Some current incoming data will not be sourced from Shipper files – e.g. Supplier / CoT
    - Provision of existing UK Link Data (e.g. AQ, FYAQ)
  - Meter Point Data – (e.g. Last Inspection Date, Address Data)
  - Organisation Data – (e.g. MAM; SMSO… etc)
  - Asset Data
  - Reading Data – (e.g. Last Read / Check Read)

- Repetitive Data provided
- Incremental Change approach has led to existing estate

	Meter Point Information (e.g. Meter Link Code / Class)
	Settlement Details (e.g. Conversion Factor)

Existing Process – Provision of Data in Support of CoS

- Discussion points for Requirement Definition:

  - Changes will be required to existing record and hierarchy formats

    - Some data will not be driven by Nomination / Confirmation receipt, but by the Supplier / CSS Registration flows (shown earlier) – does this need to be reported separate to existing flows?
    - E.g. Confirmation Response – Effective Date / Supplier / (Shipper) / CoT / Market Sector Code (NB: All mandatory currently)

    - Rationalisation of existing data provision?

      - Empty fields?
      - Remove redundancy from within records?
      - Repeatable records – e.g. Reading / Organisation / Asset?
      - Others?
