

0621 Workgroup Update
Action: 0621-0303

12/04/2018

Action: 0303 (Centrica - National Grid - Xoserve)

This action relates to 0621C (proposed storage discount)

Xoserve to provide an assessment of the potential systems implications of increasing the number of decimal places (from four to six)

Xoserve Initial Response [assume this action is applicable to **all** Gemini price-related data?]

It is anticipated increasing the number of decimal places from four to six;

- Will have a significant impact on Gemini and UK-Link (SAP-ISU) systems, interfaces and customer-related processes e.g. screen changes, invoicing file format changes, downstream systems within NGIS, reporting, etc.
- It is technically feasible but will add to the EU-GB Charging Project (Part B) timescales and costs due to potentially far-reaching consequences
- This change would need to be identified as a specific business requirement within 0621/alternate(s). It is not within the current scope of works – our ‘business as usual’ assumption is that prices are held to four decimal places
