

# Mod 0664

Theoretical examples

# Core Concepts

- 1 – Obligation on shippers to move supply points into class 4 when read performance goes below a certain level for a certain period
- 2 – Obligation on Xoserve to transfer sites when above obligation not met
- 3 – Incentive charge to recoup any benefits received during period of below target performance

# Worked example – performance obligation (1)

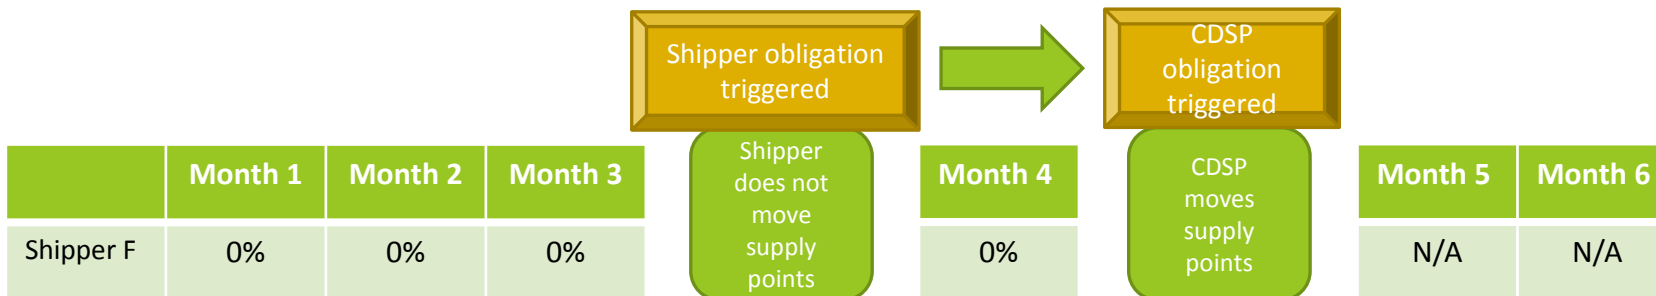

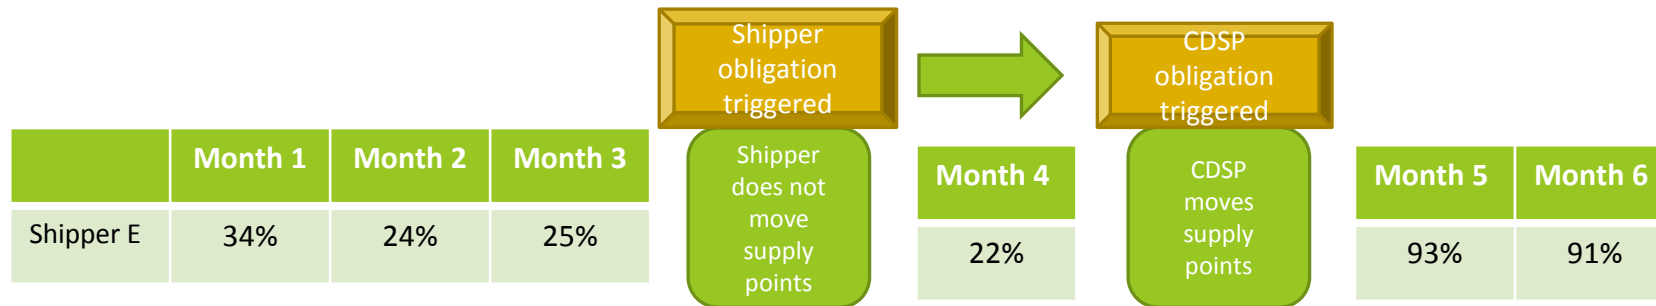

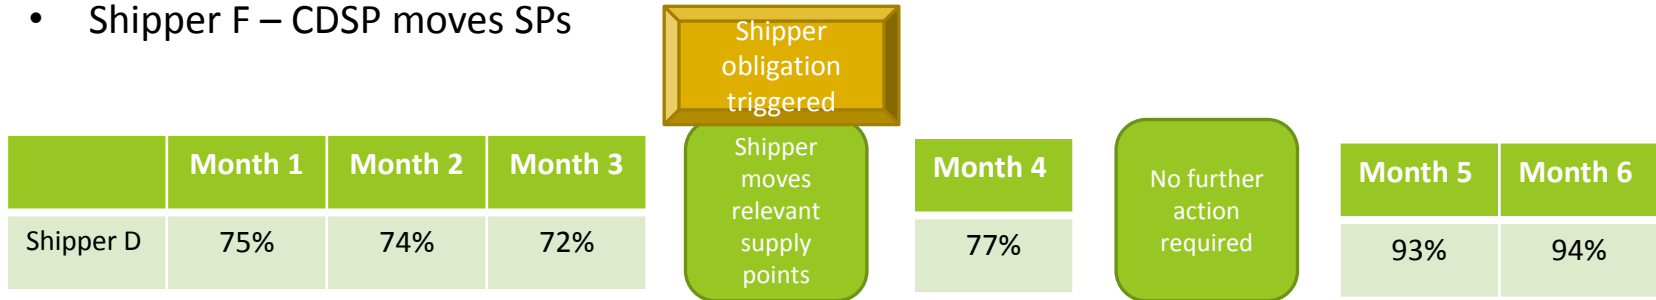

- In this example, six shippers are shown (fictional performance levels)
- 3 shippers consistently meet the performance standards
- 3 do not
- 1 shipper has no reads successfully submitted across the period

## Example – Class 3

	Read Submission	90% target		
	Month 1	Month 2	Month 3	Threshold met?
Shipper A	95%	96%	93%	Y
Shipper B	91%	90%	89%	Y
Shipper C	75%	94%	97%	Y
Shipper D	75%	74%	75%	N
Shipper E	34%	24%	25%	N
Shipper F	0%	0%	0%	N

# Worked example – performance obligation (2)

- Shipper D – moves own selected supply points
- Shipper E – CDSP moved SPs
- Shipper F – CDSP moves SPs

# Shipper E & F – CDSP class transfer

# Incentive charging

- Principle is that there is still an incentive to move classes to receive lower UIG weighting (in some EUC bands) even if supply points could be moved
- Below - Weighting factor table – gas year 2018/19

	Product/Class			
EUC	1	2	3	4
01B	0.17	43.06	46.41	94.64

# For consideration

## Charge circulation

- Charges recouped to be refunded to all parties by market share, minus [2]% admin fee

## Other issues

- Direction of weighting factors – positive principle?
- Trigger for CDSP obligation – report? Manual check?
- Trigger for shipper?
- Newly gained supply point treatment?

## Mod strands

- New entrants? Link to PC4 read performance prior to entry?
- Ongoing read performance?
- Is the current mod going beyond the specific issue currently at hand?
- Two mods? New entrants / Ongoing read performance
- Balance between enabling new entry but incentivising good quality read submission, with a system solution that isn't complex and costly
