4 Recommendation	9	Proposer: Daniel Hisgett
About this document		 daniel.hisgett@nationalgrid.com
This document is a Request, which will be presented by the Proposer to the Panel by 16 January 2020		 07971 500855
The Panel will consider the Proposer's recommendation and agree whether this Request should be referred to a Workgroup for review.		Transporter: Colin Williams
The Proposer recommends the following timetable:		 colin.williams@nationalgrid.com
<ul style="list-style-type: none"> Initial consideration by Workgroup in November 2018. Workgroup Report to be presented to Panel on or before 16 January 2020. 		 01926 655916 or 07785451 776
		Systems Provider: Xoserve
		 commercial.enquiries@xoserve.com
		 telephone

1 Request

Why is the Request being made?

The NTS Optional Commodity Charge product was introduced in 1998 to avoid inefficient bypass of the National Transmission System (NTS) by large sites located near to entry terminals. The charge is an alternative to investment, so the formula to calculate individual rates is derived from an estimated cost of laying and operating a dedicated pipeline of NTS specification. Shippers can currently elect to pay the NTS Optional Commodity Charge as an alternative to the NTS System Operator (SO) and Transmission Operator (TO), Entry and Exit Commodity Charges.

Due to changing behaviours, the NTS Optional Commodity Charge (also referred to as “Short-haul”), has seen a significant increase in its use which has impacted on other charges in a way that was not originally envisaged. As a result, it could be applied in situations that are considered inconsistent with its original purpose.

Taking on learning from recent Modifications (such as 0621, 0636, 0653), National Grid, as Proposer of Request Modification 0670R, recognises the benefit of considering this aspect of charging as part of a separate review. More importantly it should be considered as an integral part of an overall methodology and not in isolation, prior to a solution being proposed. It is considered that returning to the principles of the product will help to facilitate an industry consensus before a solution is raised, thereby helping to reduce the risk of multiple alternatives, saving time and helping to progress with the implementation of a Modification, if required.

The purpose of this Request therefore, is to conduct a review and assessment of the charging methodology that is a feature of the overall Gas Transportation Charging framework to avoid inefficient bypass of the NTS. This review Workgroup, and subsequent Workgroup report, would consider:

- The rationale and appetite for having such a charging arrangement as a feature of the overall charging methodology;
- The interaction with the likely baseline methodology it would change;
- Options presented from Workgroup participants including relevant analysis;
- The range of views on any options presented including the overall effectiveness against the rationale, including compliance with relevant EU Network Codes.
- Any updates that may be relevant from ongoing UNC Changes (e.g. 0678 and alternatives, 0686).

This review is considered necessary and should be performed, regardless of the outcomes of other related UNC Modifications, due to the time required for the review and potential implementation timescales. This proposal is to review the method by which the avoidance of inefficient bypass is managed, as part of the NTS Transportation Charging Framework. This review allows time and focus to consider whether and how the charging proposals for discouraging inefficient bypass should be catered for within any Gas Transportation Charges, including the objectives of any such arrangement that it should be measured against. It is hoped that participants will begin the review looking at the principles first, rather than trying to refashion any existing potential solution options. The assessment of these objectives and principles will determine the full scope of the review.

0678 and alternatives were discussed between January 2019 and May 2019 and currently rest with Ofgem for decision. Some of the 0678 alternatives provide a means to manage inefficient bypass via the charging methodology proposed. Other 0678 proposals do not include an arrangement for this and anticipate a new methodology to be presented separately.

Scope

The purpose of this Request is to create a Workgroup to conduct a review and assessment of the charging methodology that is used to avoid the inefficient bypass of the NTS as a feature of the overall charging framework. The group will have the opportunity to discuss options as they are presented. It is recognised that there will unlikely be a consensus on the output of the workgroup for a single option. Therefore, the workgroup and subsequent report may provide views on a range of ideas that may be taken forward in the future.

This review would assess the objectives of the charging arrangements that discourage inefficient bypass of the NTS and identify the most effective way to incorporate these into the Transportation Charging framework. In addition to reviewing the objectives of any such arrangement, the process is suggested to identify requirements, then analyse and propose potential enduring solutions within the charging framework. This can be carried out independent from, and with an awareness of, UNC Modifications that are currently awaiting decisions, to provide enough time for implementation. The level of detail of any considered options will be part of the workgroup discussions.

The workgroup has the opportunity to reflect on the discussions to date and provide a means to discuss ideas presented in how to make further progress

The Workgroup will address consequential changes to UNC derived from the review, including any potential minded to positions that may come from Ofgem's impact assessment(s), and evaluate the impacts from the proposed solution(s). Compliance with EU Tariff Code (Regulation 2017/460) will be a feature of the discussions. The timelines for any potential change will be part of the discussions.

The Workgroup will have the opportunity to discuss the impacts of any updates, assessments or outputs that can inform how or if development of this review proposal is taken further and if so, the direction it may take.

Impacts & Costs

Costs associated with the Request Proposal are currently unknown.

Impact and cost depend on the nature of the proposed solution, if any.

Recommendations

The Request aims to create a Workgroup to conduct a review and assessment of the charging methodology that is used to avoid the inefficient bypass of the NTS (currently the NTS Optional Commodity charge) as part of the overall Gas Transportation Charging framework. This review would assess the objectives, identify requirements, identify principles on which to base any solution; analyse potential options and propose an enduring proportionate solution.

The Proposer considers the proposal should be issued to a Workgroup in order to conduct a holistic review, prior to determining any solution and identify an enduring solution to be taken forward as a future Modification.

Additional Information

2 Impacts and Costs

Consideration of Wider Industry Impacts

There is the potential for wider industry impacts; the areas affected and scale are dependent on the solution identified as part of this Request and may also be influenced by other code modifications and developments. The extent of any potential impact will be considered alongside the development in the review.

3 Terms of Reference

Background

To conduct a review and assessment of the charging methodology that is a feature of the overall Gas Transportation Charging framework to avoid the inefficient bypass of the NTS (currently the NTS Optional Commodity Charge). This review would assess the objectives, identify requirements, identify principles on which to base any solution, analyse potential options and propose an enduring proportionate solution.

Topics for Discussion

- The rationale and appetite for having such a charging arrangement as a feature of the overall charging methodology;
- The interaction with the likely baseline methodology it would change;
- Options presented from Workgroup participants including relevant analysis;
- The range of views on any options presented including the overall effectiveness against the rationale, including compliance with relevant EU Network Codes.
- Any updates that may be relevant from ongoing UNC Changes (e.g. 0678 and alternatives, 0686).

Outputs

Produce a Workgroup Report for submission to the Modification Panel, containing the assessment and recommendations of the Workgroup including a draft modification where appropriate.

Composition of Workgroup

The Workgroup is open to any party that wishes to participate in the discussions.

A Workgroup meeting will be quorate with at least six (6) participants attending, of which at least two (2) shall be Shipper Users and one (1) NTS Transporter.

Meeting Arrangements

Meetings will be administered by the Joint Office and conducted in accordance with the Code Administration Code of Practice.

4 Recommendation

The Proposer invites the Panel to:

- DETERMINE that Request 0670R progress to Workgroup for review for a period of 6 months.
