

UNC816S: Questions from legal text provider

1. Do you new Eligible clauses only apply to product class 3 and 4
2. What is Rolling AQ in the UNC? I have tried and failed to find a definition
3. We added in a guidance note "utilisation of AQ correction Erroneous AQ based on read history has no adverse impact on the previous Shipper as it is used only as a corrective action for the current User" which has been added to the legal text - the legal text provider has pointed out by including this then it could be construed that the opposite is true for the other eligible causes. what do you think?
4. at the beginning of the section it says:

*The Registered User may request a change in the Annual Quantity of a Supply Meter Point on the grounds that the most recently calculated Annual Quantity does not reflect the expected (seasonally adjusted where relevant) consumption of gas over the 12 months following the date of the request **due to an eligible cause which occurred after the Read Date of the AQ Opening Reading used in the most recent calculation of the Annual Quantity.***

Legal text provider would like confirmation the same is true of our two new Eligible causes
