| <b>Relevant Charging Methodology Objective:</b> | <b>c)</b> Positive                       |

#### Reason for support/opposition: Please summarise (in one paragraph) the key reason(s)

Given the government targets for net zero and significant demand from industry there is substantial room for the biomethane industry to grow in the UK. The lack of network capacity is constraining the implementation of many new biomethane plants. Reverse compression is the most economically and technically feasible solution to removing this constraint on the gas network. It is also the most environmentally friendly solution to the problem as less energy would be used than moving biomethane by road or connecting directly to transmission networks.

Private sector investment in reverse compression would speed up construction times and likely lead to lower costs for biomethane plants.

#### Implementation: What lead-time do you wish to see prior to implementation and why?

We would support the implementation as soon as possible.

#### Impacts and Costs: What analysis, development and ongoing costs would you face?
