# 2026-27 Annual Charging Statement

1 April 2026 – 31 March 2027

# Making energy data work.

# Introduction

This publication, which is one of the final deliverables from our Business Plan process, sets out the charges for the services outlined in the Data Services Contract (DSC) for the financial year 2026-27. The charges set out in this statement reflect the application of DSC Charging Methodology to the budget for 2026-27, as approved by the Xoserve Board on 15 January 2026 and published in the final version of our 2026-29 Business Plan (BP26).

The values shown in the final version of BP26 have since been uplifted by CPI-H in December 2025 (3.6%) to reach 2026-27 prices, with the exception of General Change, Gemini, DSC Contract Budget, CDSP Service Development and CDSP Service Enhancement investments.

## Charging Schedules

In mid-February we will issue Charging Schedules to provide a more detailed breakdown of the charges we expect to be invoicing to your organisation each month, beginning in April 2026. If you require any additional information, please contact [business.planning@xoserve.com](mailto:business.planning@xoserve.com)

## Charges detail

The DSC Charges (not including Specific Charges) are split across four tables and provide the total charge per service area and investment description, as well as the breakdown by customer class.

- Table 1 - General Services Charges
- Table 2 - Infrastructure Charges
- Table 3 - Change Charges
- Table 4 - Grand total of the charges from tables 1 to 3, plus any rebates or additional charges carried forward from prior years into 2026/27. This gives the amount each customer class will be invoiced in 2026/27.
- Table 4A - a breakdown of how the prior year charges rebates and additions total is broken down by item description and the relevant plan version.
- Appendix A - DSC Specific Services charges
